Seminar 4

Coordonatele unui vector într-o bază. Schimbarea coordonatelor la schimbarea bazei

Noțiuni teoretice

a) $\underset{\text{"bază"}}{B \leq \mathbb{R}^n} \Leftrightarrow \begin{cases} (i)\ \text{card } B = n = \dim \mathbb{R}^n \\ (ii)\ B - \text{l.i} \Leftrightarrow r_A = n \text{ (nr. vect.)}, \text{ unde } A - \text{matricea componentelor vectorilor din } B \end{cases}$

b) Dacă $\left.\begin{array}{l} B = \{u_1, u_2, \dots, u_n\} \leq \mathbb{R}^n \\ y \in \mathbb{R}^n \text{ - oarecare} \end{array}\right| \Rightarrow (\exists!)\ \lambda_i \in \mathbb{R},\ i = \overline{1,n}$ a.î.: $y = \lambda_1 u_1 + \lambda_2 u_2 + \dots + \lambda_n u_n$

$\Updownarrow$

$y_B = [\lambda_1, \lambda_2, \dots, \lambda_n]$ - coordonatele lui y în baza B

Ex:

① Fie mulțimea $B = \{u_1, u_2, u_3\} \subset \mathbb{R}^3$ cu $\begin{cases} u_1 = (1, 0, -1)^T \\ u_2 = (-2, 1, 3)^T \\ u_3 = (0, 2, 1)^T \end{cases}$. Arătați că:

a) mulțimea de vectori B formează o bază în sp. lin. $\mathbb{R}^3$ ($B \leq \mathbb{R}^3$);

b) determinați coordonatele vectorului $v = (3, -1, 4)^T$ în baza B (not: $v = (3, -1, 4)^T \Rightarrow v_B = ?$)

c) știind că coordonatele vectorului $w \in \mathbb{R}^3$ în baza B sunt $2, -1, -1$ (not: $w_B = [2, -1, -1]$) determinați componentele vectorului w ($w = ? \Leftrightarrow w_{B_c} = ?$)

Dem:

a) $B \leq \mathbb{R}^3 \Leftrightarrow \begin{cases} (i)\ \text{card } B = 3 = \dim \mathbb{R}^3 \text{ (A)} \\ (ii)\ B - \text{l.i} \Leftrightarrow r_A = 3 \text{ (=nr. vect.)} \end{cases}$ cu $A = \begin{array}{c} \begin{matrix} u_1 & u_2 & u_3 \end{matrix} \\ \begin{pmatrix} 1 & -2 & 0 \\ 0 & 1 & 2 \\ -1 & 3 & 1 \end{pmatrix} \end{array}$ matricea componentelor vectorilor

Vom determina r_A cu t.e.:

$$A = \begin{pmatrix} \boxed{1} & -2 & 0 \\ 0 & 1 & 2 \\ -1 & 3 & 1 \end{pmatrix} \sim \begin{pmatrix} 1 & -2 & 0 \\ 0 & \boxed{1} & 2 \\ 0 & 1 & 1 \end{pmatrix} \begin{matrix} \\ \cdot 2 \mid \cdot(-1) \\ \\ \end{matrix} \sim \begin{pmatrix} 1 & 0 & 4 \\ 0 & 1 & 2 \\ 0 & 0 & \boxed{-1} \end{pmatrix} \begin{matrix} \\ \\ \cdot 2 \mid \cdot 4 \end{matrix} \sim \begin{pmatrix} 1 & 0 & 0 \\ 0 & 1 & 0 \\ 0 & 0 & 1 \end{pmatrix} = A_{ech} = I_3 \Rightarrow r_A = 3 \Leftrightarrow (ii) \text{ (A)}$$

$\Downarrow$

$B \leq \mathbb{R}^3$

b) $\underline{v = (3, -1, 4)^T \overset{?}{\Longrightarrow} v_B = [\alpha_1, \alpha_2, \alpha_3]}$

Notăm cu $\alpha_1, \alpha_2, \alpha_3$ coordonatele vectorului v în baza B, adică:

$v_B = [\alpha_1, \alpha_2, \alpha_3] \Leftrightarrow v = \alpha_1 u_1 + \alpha_2 u_2 + \alpha_3 u_3 \Leftrightarrow (3, -1, 4)^T = \alpha_1 (1, 0, -1)^T + \alpha_2 (-2, 1, 3)^T + \alpha_3 (0, 2, 1)^T \Leftrightarrow$

$$(*) \begin{cases} \alpha_1 - 2\alpha_2 = 3 \\ \alpha_2 + 2\alpha_3 = -1 \\ -\alpha_1 + 3\alpha_2 + \alpha_3 = 4 \end{cases} \xrightarrow[\text{cu met. lui Gauss}]{\text{rezolvăm}} \bar{A} = \begin{array}{c} \begin{matrix} \alpha_1 & \alpha_2 & \alpha_3 & \end{matrix} \\ \begin{pmatrix} \boxed{1} & -2 & 0 & 3 \\ 0 & 1 & 2 & -1 \\ -1 & 3 & 1 & 4 \end{pmatrix} \\ \begin{matrix} u_1 & u_2 & u_3 & v \end{matrix} \end{array} \sim \begin{pmatrix} 1 & -2 & 0 & 3 \\ 0 & \boxed{1} & 2 & -1 \\ 0 & 1 & 1 & 7 \end{pmatrix} \begin{matrix} \\ \cdot 2 \mid \cdot(-1) \\ \\ \end{matrix} \sim \begin{pmatrix} 1 & 0 & 4 & 1 \\ 0 & 1 & 2 & -1 \\ 0 & 0 & \boxed{-1} & 8 \end{pmatrix} \begin{matrix} \\ \\ \cdot 2 \mid \cdot 4 \end{matrix} \sim \begin{pmatrix} 1 & 0 & 0 & 33 \\ 0 & 1 & 0 & 15 \\ 0 & 0 & 1 & -8 \end{pmatrix}$$

$\Rightarrow \begin{cases} \alpha_1 = 33 \\ \alpha_2 = 15 \\ \alpha_3 = -8 \end{cases} \Leftrightarrow \underline{v = 33u_1 + 15u_2 - 8u_3} \Leftrightarrow \underline{v_B = [33, 15, -8]}$

Verificare (calcule): $v = 33(1, 0, -1)^T + 15(-2, 1, 3)^T - 8(0, 2, 1)^T = (33, 0, -33)^T + (-30, 15, 45)^T + (0, -16, -8)^T = \underset{\text{adevărat}}{\underline{(3, -1, 4)^T}}$

c) Avem $w_B = [2, -1, -1] \Leftrightarrow w = 2u_1 - u_2 - u_3 = 2(1, 0, -1)^T - (-2, 1, 3)^T - (0, 2, 1)^T = \underline{(4, -3, -6)^T}$

deci $\underline{w = (4, -3, -6)^T} \Leftrightarrow w = 4e_1 - 3e_2 - 6e_3 \Leftrightarrow w_{B_c} = [4, -3, -6]$ unde $(B_c) \begin{cases} e_1 = (1, 0, 0)^T \\ e_2 = (0, 1, 0)^T \\ e_3 = (0, 0, 1)^T \end{cases}$

q.e.d.

③ Fie $(B)\begin{cases} u_1=(3,-1)^T \\ u_2=(-4,1)^T \end{cases} \in \mathbb{R}^2$ și $(B')\begin{cases} v_1=(5,2)^T \\ v_2=(-3,-1)^T \end{cases} \in \mathbb{R}^2$, se cere:

a) $B;\ B' \leq \mathbb{R}^2$

b) $x=(-5,4)^T \Rightarrow \begin{cases} x_B=? \\ x_{B'}=? \end{cases}$

c) $y_B=[1,2] \Rightarrow y_{B'}=?$

d) $z_{B'}=[-1,-3] \Rightarrow z_B=?$

e) $S_{B'|B}=?$ și $S'_{B|B'}=?$

Dem:

a) $B \leq \mathbb{R}^2 \Leftrightarrow \begin{cases} \text{(i) card } B = 2 = \dim \mathbb{R}^2 \text{ (adev.)} \\ \text{(ii) } B - \text{L.i} \Leftrightarrow r_A = 2 \,(= \text{nr. vect.}) \end{cases}$ cu $A=\begin{array}{c} \begin{array}{cc} u_1 & u_2 \end{array} \\ \begin{pmatrix} 3 & -4 \\ -1 & 1 \end{pmatrix} \end{array}$ (evident adev.)

$B' \leq \mathbb{R}^2 \Leftrightarrow \begin{cases} \text{(i) card } B' = 2 = \dim \mathbb{R}^2 \text{ (A)} \\ \text{(ii) } B' - \text{L.i} \Leftrightarrow r_{A'} = 2 \end{cases}$, $A'=\begin{array}{c} \begin{array}{cc} v_1 & v_2 \end{array} \\ \begin{pmatrix} 5 & -3 \\ 2 & -1 \end{pmatrix} \end{array}$ (A)

Obs: pentru celelalte puncte, voi folosi <u>doar</u> lema substituției (nu și met. lui Gauss)

b)

b₁) $x_B \overset{?}{=} [\alpha_1, \alpha_2]$

B	x	u_1	u_2	
e_1	-5	3	-4	
e_2	4	$\boxed{-1}$	1	/(-1)/·3
e_1	7	0	$\boxed{-1}$	/(-1)/(-1)
